“Þur sarriþu þursa trutin”: Monster-Fighting and Medicine in Early Medieval Scandinavia

Introduction

Healing does not feature prominently in those medieval texts canonically associated with what has traditionally been termed ‘Old Norse mythology’. Although healing powers find mention,² medical texts themselves are little attested in our medieval Scandinavian manuscript record, while illness and healing are not presented as central themes of medieval Scandinavians' mythical understanding of the world. Healing in this tradition has, accordingly, also received little attention from scholars.³ This image contrasts with the medieval Christianity with which non-Christian Scandinavian traditions co-existed: miracles and metaphors of healing are central not only to the New Testament, but also to the many saints' lives which it inspired, putting the healing of the sick at the centre of Christian ideologies—as the considerations of the relationships between Christianity and healing in later periods by Eilola and Hokkanen in this volume emphasise.⁴ We need not doubt that the differences in emphasis between traditional Scandinavian mythological texts and Christian ones reflect different ideological emphases. But I argue here that interactions between ideas about health and healing on the one hand, and wider belief-systems, encompassing morality, on the other, were more important in traditional Scandinavian beliefs than our manuscript record would suggest.

The core evidence from which I argue comprises two texts in Old Norse (the medieval Scandinavian language), written using runes, and both surviving outside the

---

¹ The bulk of this paper was written during a research fellowship at the Helsinki Collegium for Advanced Studies, and partly prompted by my students in the University of Helsinki’s Renvall Institute for Area and Cultural Studies. Their influence on this paper will be apparent in its Finnic perspectives, and I thank them accordingly. The paper has benefitted from comments made by a number of my colleagues at Leeds; Malin Grahn, Sari Kivistö, Edith Grüber and Monica Sonck; and most especially, of course, Douglas Aiton, Marrku Hokkanen and Jari Eilola.

mainstream of our Scandinavian textual record: one in an English manuscript, the other archaeologically. Each of these is a medicinal charm intended to counteract illness and directed at beings called **þursar** (singular **þurs**). In themselves, these texts are well-known, but I suggest that the attitudes to illness which they imply are more deeply connected than has been realised to the wider world-views more prominently attested in medieval Scandinavian mythological texts. If so, we can situate beliefs about illness and healing in a broader cultural—and therefore moral—context, to understand more fully the interactions between these spheres in medieval Scandinavia’s non-Christian traditions. One of my main methods in making this argument is to argue that the meanings of the words which we find in our texts contain revealing evidence about past cultural categorisations. In doing so, I draw on the methods of comparative philology, which recognises that, where we lack detailed evidence for the meanings of a word in one language, the meanings of its cognates in closely related languages can provide useful additional indicators for what it is likely to have meant. The main source of comparisons here is Old English, a language not only closely related to Old Norse, but in which medicinal terminology is well-attested. I argue that **þurs** can be understood at some level not only to denote a kind of monster (as has traditionally been recognised) but also, at one and the same time, an illness. This implies a discourse in which healing and illness can be understood as a transformation of one of the fundamental themes of medieval Scandinavian mythologies: the cosmological struggle of the human in-group and its gods against the barbarians and monsters which threaten the fabric of society.

My arguments introduce connections between morality and health into our understanding of medieval Scandinavian world-views, but the place of moral transgression specifically is harder to identify, because the evidence on which I focus here does not present clear correlations between moral transgression and the aetiology of illness. This stage of my argument, then, aims only to sketch a possibility, on the basis only of a small part of the available medieval and comparative evidence. Wider evidence concerning **þursar** does include indicators linking their activities to people’s moral transgressions, the most prominent among them being a mythological poem called **Skírnismál**. Moreover, the Finnish folk-poem **Řidend snynt**, an aetiological text about the origin (literally, the birth) of rickets, describes the activities of a **tursas**—**tursas** being a Finnish loan-word deriving from **þurs**. This text provides (in keeping with the spirit of the present collection) a modern anthropological parallel to the medieval material which helps to illustrate the kinds of networks between moral transgression and health which beliefs in **þursar** might have promoted.

**What is a **þurs**?**

**þurs** is an Old Norse word with cognates in all the medieval Germanic languages, prominently Old English **þyrs** and German **Turse**. In addition, it was borrowed from the Common Germanic language from which all these languages descend into Finnish, as **tursas** (and possibly, at later times or with developments within Finnish, as **turso**, **turilas** and **turisas**, but the case here is less clear). Dictionaries define it with terms such as ‘ogre’ and ‘giant’, while also mentioning the fact that **þurs** was the name of the rune **þ**. This is consistent with the cognate evidence: Old English **þyrs**, and the

---

6 See HAAVIO, M. (1967), Suomalainen mytologia, Porvoo, WSOY, pp. 102–24; XXXXXXXSANAKIRJA; each of these words could, and in some contexts probably should, also be taken as a personal name rather than a common noun.

7 To cite some standard definitions of the Norse term, SVEINBJÖRN EGISSON (1931), Lexicon poeticum antiquæ linguae septentrionalis/Ordbog over det norsk-islandske skjaldesprog, 2nd
early forms of the German Turse, gloss terms like cyclops, Orcus and Colossus (though not these alone), indicating meanings similar to the Norse ðurs.\(^8\)

There are, of course, more subtle aspects to ðurs’s (doubtless changing) meanings, which have yet to receive a full analysis. Cleasby and Vigfusson specified the ‘notion of surliness and stupidity’.\(^9\) In our canonical mythological texts, ðursar invariably appear evil, but the ðurs Þórir in Grettis saga chapter 61, born of mixed giant and human parentage, is a sympathetic character.\(^10\) Another connotation, omitted by the lexicographers but which I discuss somewhat below, is one of sexuality, which emerges most clearly from a line in the Icelandic rune-poem, first attested in manuscript around 1500, explicating the rune-name ðurs: ‘ð[urs] is women’s torment and crags’ inhabitant, / and Valrún’s mate’).\(^11\) This description is fairly well paralleled by Norwegian sources: the Norwegian rune-poem, whose earliest surviving copies are from 1636 but were based on a lost, earlier manuscript, describes ð with ‘ðurs vældr kvennu’ (‘ðurs causes women’s illness’), which parallels the Icelandic texts’ ðurs er kvennu kvöl.\(^12\)

Meanwhile, Jonna Louis-Jensen has argued that the cryptic runic inscription 7 from Bø church in Telemark, from around 1200, uses the phrase ‘fialsibui’ (in normalised spelling, fjalls íbúi, ‘mountain’s inhabitant’) to denote the rune ð, which seems to indicate that a characterisation of ðursar like the kletta íbúi of the Icelandic text was already current centuries before our manuscripts of the rune-poems.\(^13\)

Understanding the connotations of ðurs may be particularly important for understanding how far it was synonymous with words of related meaning. There has long been a tendency to regard our words for mythical beings in Old Icelandic to represent a lexical set like robin, sparrow and hawk, in which each word’s meaning is mutually exclusive of the others’, but it is also possible that ðurs belongs (as well or instead) to a more common kind of lexical set, which can be exemplified by monarch, king and ruler.\(^14\) It would be possible to find people who could only be described with one of these words, and people who could be described by all at once—and this seems fairly clearly to be true of words like ðurs and other words for monsters. Thus stanza 25 of the poem Helgakviða Hjörvarðssonar, one of the corpus of mythological and heroic poetry known as the Poetic Edda, has the hero Atli refuse a request by the giantess Hrímgöðr, who wants to take compensation for her father’s killing by
sleeping with his slayer, with the insult

‘Loðinn heitir, er þic scal eiga, leið ertu mann-kyri;
sá býr í Þolleyio þurs,
hundvíss iotunn, hraunbúa verstr;
sá er þér macligr maðr.’

‘He is called Loðinn [‘hairy’], who will have you, you are loathsome to humans;
the _þurs_ that lives onolley,
a very wise _jötunn_ [‘giant’], worst of _hraunbúar_ [‘rock/lava-dwellers’]:
he is a man well-suited to you’

Atli refers to Loðinn with _þurs_, _jötunn_, _hraunbúi_, and even _maðr_ (‘person’). One
reason for the variation in terminology in this and similar texts is of course the
metrical and aesthetic requirements of poetry, but equally Snorri Sturluson supported
his prose claim, in the earlier thirteenth century, that ‘Ættir hrímþursa’ (‘the races of
the frost-þursar’) descend from Aurgelmir/Ymir by quoting the statement in _Hyndluljóð_
stanza 33 that ‘iotnar allir frá Ymi komnir’ (‘all _jötnar_ [‘giants’] come from Ymir’). The
variation between _jötunn_ and _þurs_ is also paralleled in Old English, where the poem
_Beowulf_ refers to the monster Grendel by both _þyrs_ and _eoten_ (and a good deal
besides). Once more, there is a likelihood here that we are dealing to some extent
with figurative rather than literal language, but the evidence is sufficient to put the
burden of proof on those who would assume that words like _þurs_ and _jötunn_ denoted
distinct races (check Haavio 117–18, and dis?XX). My argument in the next section extends this kind of thinking to another aspect of
the meanings of _þurs_, to argue that we must not only be willing to see different words
for monsters as partial synonyms, but to be able to denote things which are in our
world-views members of entirely different ontological categories—specifically
illnesses.

Monsters and illness

As my summary above shows, senses relating to illness have not been recognised for
_þurs_ in Old Norse lexicography. Tellingly, our principle evidence for such associations
derives from a text-type which enjoys little direct representation in our medieval
Scandinavian corpus, but which Eddaic poems like _Hávamál_ and _Sigrdrífumál_,
alongside the evidence of neighbouring medieval regions and later texts, suggest was
widespread: healing charms. Though written in Old Norse and in runic form, the most
relevant of these survives not in Scandinavia, but in a portion of the English
manuscript British Library, Cotton Caligula A.xv, from Christ Church Canterbury and
dated to around 1073×76; it is known accordingly as the Canterbury Rune-Charm.
Linguistic evidence suggests that the charm is likely first to have been written down
by about 1000, by a speaker of East Norse (the ancestor-language of Danish and
Swedish); it runs: ‘kurið sarþuara far þu nu funtn istu þur uigi þik / þorsa trutin iuril
sarþuara uþr aþrauari’. This can be standardised as ‘Kuril sárþvara far þú nú, fundinn
ertu. Þórr vígi þik þursa dróttin, Iuril (leg. Kuril) sárþvara. Viðr áðravari (leg. -vara)’ and
into English as ‘Kuril of the wound-spear, go now, you have been found. May Þórr
consecrate you, lord of _þursar_, Kuril of the wound-spear. Against _?vein-pus_.’ The
charm is not without its problems, but it clearly envisages Kuril both as a supernatural
being (and specifically lord of _þursar_), and as the root cause of poisonous fluid in the

---

15 Likewise, _Vafþrúðnismál_ stanza 33 refers to Aurgelmir both as a _jötunn_ and a _hrímþurs_.
17 Lines 426 and 761 respectively, ed. KLAEBER, FR. (1950), _Beowulf_, 3rd edn, Boston, Heath, pp. 16 and 29.
veins. Finding and attacking Kuril seems to be a means to deal with this symptom. Trying to decide whether Kuril is to be classified in our own world-views as a being or an illnesses will not greatly help us to understand this text: what will is to recognise that illness could in some sense be conceptualised as a being, and interacted with on that basis.

Þórr’s role as a god to be invoked for healing in the Canterbury Rune-Charm is not well paralleled in our manuscript evidence. However, about seventy-five pendants in the form of hammers survive from early medieval Scandinavia, and have been associated with Þórr on account of his possession of the hammer Mjöllnir in a wide range of texts. Meanwhile, they have also been assumed to have had amuletic functions, a suggestion which gains support from the existence of hammers inscribed with crosses, worn alongside crosses in burials, or cast alongside crosses in moulds, suggesting that the hammers may have had similar functions to crucifixes. Moreover, the early eleventh-century copper amulet from Kvinneby in Sweden seems to invoke him in healing, with the text ‘þorketihansmiæmhamrisamyhc’ (i.e. Þórr gæti hans mēr þæm hamri [e]s Ámr hyrr, ‘may Þórr guard him with that hammer which strikes Ámr’), connecting both Þórr and his hammer with (amuletic) healing. These points would link Þórr with amuletic protection against day-to-day threats, whether from monsters, illnesses, or other misfortune—but though conventional wisdom, they also rely on a chain of inference which is rather poorly substantiated.

Nobilissimum illa gens templum habet, quod Ubsola dicitur, non longe postum ab Sictona civitate. In hoc templo, quod totum ex auro paratum est, statuas trium deorum veneratur populus, ita ut potentissimus eorum Thor in medio solium habeat triclinio; hinc et inde locum possident Wodan et Friccio. Quorum significationes eiusmodi sunt: ‘Thor’, inquit, ‘praesidet in aere, qui tonitrus et fulmina, ventos ymbresque, serena et fruges gubernat ... Thor autem cum sceptro Iovem simulare videtur... Omnibus itaque diis suis attributos habent sacerdotes, qui sacrificia populi offerant. Si pestis et famis imminet, Thor ydolo lybatur, si bellum, Wodani, si nuptiae celebrandae sunt, Friconi.

That folk has a very famous temple called Uppsala, situated not far from the city of Sigtuna. In this temple, entirely decked out in gold, the people worship the statues of three gods in such wise that the mightiest of them, Thor, occupies a throne in the middle of the chamber; Wodan and Fricono have places on either side. The significance of these gods is as follows: Thor, they say, presides over the air, which governs the thunder and lightning, the winds and rains, fair weather and crops ... Thor with his scepter apparently resembles Jove...

For all their gods there are appointed priests to offer sacrifices for the people. If plague and famine threaten, a libation is poured to the idol Thor; if war, to Wodan; if marriages are

to be celebrated, to Fricco.

The reliability of Adam’s account has long been doubted: to name the main issues, he was operating in an ideologically and politically charged Christian community, which is likely to have strongly coloured his understanding and reporting of pagan traditions; he clearly Classicised his material to some degree, and perhaps considerably; and he was not an eye-witness to what he described, while the proximity of his oral sources to events is not clear either.\footnote{22} It is worth emphasising, however, that the passage in question is part of Adam’s original *Gesta*, to be distinguished from the infamous *scholìa* 138–41, which provide more lurid and accordingly less plausible further details about the temple.\footnote{23} Meanwhile, Adam’s source value relative to our other material is rising, insofar as we are increasingly aware that our later, vernacular Icelandic sources —most especially Snorri Sturluson’s *Edda*—are themselves compromised by similar problems.\footnote{24} Moreover, Perkins has pointed out that Adam’s attribution to Thor of power over the wind, though not apparent in Snorri’s mythography, is well attested in sources which must be independent, most strikingly Dudo of St Quentin’s *Gesta Normannorum*, of around 1060, and so is surely reliable.\footnote{25} In the same way, we can see Adam’s association of Thor with the aversion of plague and famine to be consistent with the evidence of the Canterbury Rune-Charm, which invokes Þórr against Kuril, the *þursa dróttinn*, to cure áðravari.

Turning to the representation of *þursar* in the Canterbury rune-charm as sources of illness, this is consistent with their portrayal in the Norwegian rune-poem as the cause of ‘women’s illness’. As I have mentioned, this evidence is late; but roughly contemporary with the Canterbury rune-charm is the Sigtuna Amulet, found during excavations in 1931. This may represent the means by which the text of the Canterbury Rune Charm found its way to Christ Church, Canterbury; at any rate, it comes from the area described by Adam, at much the same time as he described it. The amulet is a thin copper plate with an inscription on each side. Despite Høst’s claim that ‘side B har intet fil felles med Canterburyinnskriften’ (‘side B has nothing in common with the Canterbury inscription’), it is not self-evident whether the inscriptions are to be read consecutively or as two separate texts, and it is worth quoting both.\footnote{26}

\begin{verbatim}

Njót lyfja!

A: Þórr/þurs of wound-fever, lord of þursar, flee now; you have been found.

B: Have for yourself three pangs of deprivation, wolf!
Have for yourself nine contraints/n-runes, wolf!
?Three ices/i-runes, these ices/i-runes drive on, the wolf is content!
Benefit from the medicine!

Besides the uncertainty as to the relationship between the two inscriptions, these texts present a number of complications, and the translations (and indeed normalisations) of the inscriptions are necessarily tentative. Two things are clear, however. The inscription on the second side seems unambiguously to associate itself with lyf ‘medicine’, encouraging us to suppose that the shorter inscription on the first side was also—like the Canterbury Rune-Charm—intended for medicinal purposes rather than, for example, helping the bearer in other kinds of encounters with supernatural beings. Meanwhile, the inscription on the first side is verbally similar enough to the Canterbury Rune-Charm to suggest that they represent a wider tradition of similar incantations, involving the idea that the cause of an illness might be a ‘lord of þursar’. Whether the ‘lord of þursar’ on the Sigtuna Amulet should be identified as the pagan god Þórr or simply as a purs is hard to judge. Either way, however, the prospect that a purs could in some sense be synonymous with an illness is clear.

As a proportion of our complete corpus of earlier medieval Scandinavian charms, the Canterbury Rune-Charm and the Sigtuna Amulet are significant enough to suggest that discourses associating pursar with causing illness were prominent; but in finite terms, they admittedly afford rather slight evidence for traditions associating supernatural beings with illness. However, wider parallels are easily come by. One set is provided by medieval Christian thought, in which possession by a demon—whereby monster and illness are again effectively identical—was a reasonably prominent aetiology of certain kinds of illness. In such cases, the illness is usually identical with the supernatural being, insofar as it commences with its possession and ceases with its expulsion.

Analogues can also be found, however, in the non-Christian traditions of Germanic-speaking cultures. The strongest case is that of dvergr and its Old English cognate dweorg. The modern English reflex of this word is dwarf, and in our medieval English and Icelandic texts it indeed denotes small beings, usually, at least in the Scandinavian tradition, supernatural. We have, however, just enough evidence in

27 It was conventional in runic inscriptions, when two identical consonants appeared next to each other, to write only one rune, and HØST (1952), p. 345 cites examples where this occurs despite intervening punctuation, while the vowels distinguished as ö and u in standardised Old Norse spelling were not distinguished in runic writing, meaning that the first word of the inscription could be read as pórr or purs. If we read purs sárríðu, the metrical requirement for alliteration would be met by repeating the word with pursa dróttinn, which from the point of view of literary merit is not promising; but if we read pórr sárríðu we must probably envisage the demonisation in an increasingly Christianised Scandinavian culture of the traditionally benign god pórr such that he becomes aligned with his traditional enemies the pursar.

Scandinavia to discern a quite different side to the word’s meaning, in the form of a
game of a human cranium from Ribe inscribed, around the eighth century, with the
text ‘ulfuraukipinaukhutuir “hi”iibburlusiur ð / þaimaukiauktuirkunn [hole] buur’, which
can be standardised as Ulfr auk Öðinn auk Hó-’tiur’. Hjálp ‘buri’ es viðr / þæima værki.
Auk dverg uninn. Bóurr. This we might tentatively translate as ‘Ulfr/Wolf and Öðinn
and high-’tiur. buri is help against this pain. And the dverg Bóurr (is) overcome’. 30 This
evidence is consolidated by Old English material: by contrast with the other earlier
medieval Germanic languages, surviving writings in Old English include a large
number of medical texts, ranging from poetic charms though mundane but apparently
local prose remedies to translated Latin medical writing. Without this corpus, the
meaning of dweorg would have seemed limited to short people. However, the medical
texts tell a different story. By the eleventh century, at least, dweorg seems fairly
unambiguously to denote fever, and need not (always) have connoted beings, as in
the CXXX XXX ed boyle History of Science B-3 CAM XXXXX Old English translation of the
Peri didaxeon, where a remedy for asthma mentions the symptom ‘hwile he riþaþ
swilce he on dweorge sy’ (‘sometimes he shakes/writhes as though he was on
dweorh’) for ‘interdum et februunt’ (‘sometimes they also suffer fever’) in the Latin
base-text. 31 As with the Norse lexicography mentioned above, the recent Dictionary of
Old English divides citations of dweorg neatly into the two senses ‘dwarf, pygmy’ and
‘fever, perhaps high fever with delirium and convulsions’. 32 However, the two senses
are surveily bridged by usage of dvergr on the Ribe Cranium, and by a text in the early
eleventh-century manuscript British Library Harley 585, which contains a range of
medical texts, the last of which comprises a miscellaneous collection of remedies
known as Lacnunga. Among these is a charm for an illness identified in the prose as
dweorgh, which explicitly conceives of the illnessness in terms of a being (wiht)
treating the sufferer of the disease as its horse (hæncgest). 33 Although there may be instances of dweorg which belong under the sense ‘fever’, there is also at least one occasion
where the distinction is not a helpful one. Moreover, the image of the wiht treating the
sufferer of the illness as its horse in turn recalls well-attested traditions in our
medieval and later evidence from Germanic-speaking cultures in which the female
supernatural beings called mörur in Old Norse (singular mara) and maran in Old
English (singular mære), who give their name to the modern English nightmare, ride
their victims, causing illness, injury or death, and particularly hallucinatory
experiences which might be categorised alongside the fevers mentioned above. 34

Reinterpreting *þursar*, then, as potentially not only causes of illness, but to be at some levels synonymous with illness, is plausible, and moreover seems to be representative of a larger and more widespread, if only patchily attested, medieval Scandinavian discourse. Recognising this affords us, in turn, an opportunity to situate these discourses in a wider cultural—specifically mythological—framework. Our unusually rich mythological evidence from medieval Scandinavia allows us to argue that an individual’s experience of a *þurs* as a cause of illness could be reinterpreted as a microcosm of a larger, mythological struggle, aligning the experience of the sufferer with a wider world charged with moral meaning. To begin explicating this claim at a lexical level, it is possible to situate the term *þurs*, as a word denoting monsters, in a wider semantic mapping of Old Icelandic words for supernatural beings, for which I have argued elsewhere mainly on the basis of our early poetic records, and which itself correlates with narrative evidence for traditional medieval Scandinavian world-views.\(^{35}\) As figure 1 shows, the world of male supernatural beings\(^{36}\) can be divided into beings whose actions are fundamentally aligned with the interests of the human in-group, whom we might term gods (such as the *æsir* and *álfar*), and those whose actions fundamentally threaten the fabric of the human in-group’s existence, whom we might term monsters. Questions of the relationship of humans to supernatural beings

---

\(^{36}\) Females are excluded from the analysis as being less paradigmatic examples of beings in Old Norse world-views than males: HALL (2007b), pp. 22–23.
beings are not ones which I can go into at length here—the seventeenth-century Scandinavian witches, the topic of Eilola’s contribution to this collection, provide one example of the complexities which these questions can entail. I have argued elsewhere that the ontological distinction between people and their gods may never have been sharp, to the point at which we should perhaps understand gods as a sub-category of humans (or at least humans of the in-group), while some categories of people could be monstrous. Notwithstanding these complexities, however, the diagram still represents the fundamental lineaments of a world view.

The semantic field diagram in turn represents one of the basic structuring principles of medieval Scandinavian world-views, in which the human in-group and their gods were locked into a cosmic struggle with the monsters which threatened their society. Monster-fighting occurs widely in medieval Scandinavian narratives of all kinds and carries great ideological significance; the point is epitomised by the fact that the guiding framework for our surviving Scandinavian mythological texts is the inevitability of the Ragnarök, a cataclysm in which gods and men will fight against the monsters and, to at least a significant extent, die. Of all the gods, it is Þórr who is pre-eminent as a fighter of monsters. This being so, his invocation against a þurs in the Canterbury Rune-Charm represents the local application of a global mythological concept. If we are willing to connect the wider evidence for Þórr’s invocation against illness and for the conceptual association of (some) illness with monsters, we can begin to perceive a discourse in which the cosmological framework of medieval Scandinavian worldviews was applied at a day-to-day level to provide a medium for healing. If Þórr was the gods’ bulwark against monsters, and if monsters were potentially, in some sense, illness, he might also be people’s bulwark against illnesses. Having reconstructed this discourse, we can in turn posit that it gave meaning and structure to the experience of illness, not least in allowing potentially debilitating ailments to be interpreted in terms of a model of heroic struggle against external forces whose threats to individuals were symptomatic of the threat they posed to society as a whole (Eilola, this volume).

As in the Central African context described in this volume by Hokkanen, it is possible, then, to perceive external, supernatural forces as causes of illness in early medieval, and to some extent pre-Conversion Scandinavian society. Given our limited evidence for this society, this is a significant achievement. Moving beyond it to link illness with moral transgression specifically—as in the ‘diseases of men’ discussed by Hokkanen—is a greater challenge again. Links between morality and health were prominent in medieval Christian thought—albeit that the idea of illness as punishment for sin, or purgation of sin, had to compete with a range of other aetiologies—but texts like the Canterbury Rune-Charm provide little basis for linking the assault of a þurs with moral transgressions. We must be ready to accept the possibility, then, that moral transgression was not a (prominent) aetiology of illness—which, if so, would be a noteworthy feature of pre- and non-Christian medieval Scandinavian culture. There is, however, enough evidence to connect assaults by þursar with moral transgression to establish the possibility that this kind of discourse existed. The key text for this discussion is the Eddaic poem with the most extensive attestations of þurs.

Unlike our material concerning Þórr, which emphasises only the martial hostility between the Æsir (the main group of gods) and the jötnar, Skírnismál is a paradigmatic text for a more complex side of their relationship. As Clunies Ross, in particular, has argued, the medieval Scandinavian mythological world allowed for marriage between mythological groups, but only according to strictly regulated patterns determined by group status (as perceived from the perspective of the ingroup—mythologically the Æsir, mundanely the culturally and linguistically Scandinavian in-group). The group of highest status was the Æsir; a group of gods from a different tribe, the Vanir, are of second highest status; and the lowest status group is that of the monsters, prototypically the jötnar. From the point of view of the Æsir, it was unacceptable for women to marry men of a lower-status group, but it was acceptable for men to have sexual liaisons with women of a lower group in status than their own, and for Vanir men to marry giantesses. Skírnismál is a paradigmatic example of this process: in it, the Vanr Freyr falls in love with the jötunn Gerðr, and Freyr sends his servant Skírnir to woo her. Skírnir begins his attempt by offering Gerðr wealth, but she refuses. He threatens to behead her, which gets him no further. Finally, then, he pronounces an eleven-stanza curse—or perhaps we should say threatens Gerðr by describing the curse which he can put on her, since the status of his speech act is somewhat ambiguous within the poem—which is sufficient to convince her to accept Freyr. It is the content of the curse, however, which is my main concern here, and I quote the most pertinent stanzas (stanzas 30–36):

Monsters [tramar] must humiliate you the whole day in the farmsteads of jötnar; to the hall of hrímþursar you must creep, every day, without choice, creep lacking choice; you must have weeping in return for pleasure and accompany grief with tears.

You must live forever with a three-headed pars or be without a man; may your lust grip may ?consumption ?consume you; become like a thistle—one which was crushed in ?the last part of harvest.

I walked to a wood and up to a young tree to get a ?magic wand, a ?magic wand I got.

Óöinn is angry with you, the best of the gods is angry with you, Freyr must hate you, the amazingly bad girl, and you have gained the ?violent anger of the gods.

Let the jötnar hear, let the hrímþursar hear,

41 Although pars occurs as a simplex six times in þrymskviða but only four in Skírnismál, þrymskviða’s attestations are limited to the formula pursa dróttin.

The sons of the Suttungar, the troop of the Æsir themselves,
how I forbid, how I exclude,
the merriment of people from the maid,
the enjoyment of people['s company] from the maid.

Hrímgrímnir is the name of the purs who must have you
down below the corpse-gates;
there may farm-boys give you goats' urine
at the roots of the tree.
Never get another drink,
girl, from your wishes,
girl, at my wishes.

I carve purs [rune-name] at you and three letters:
dergi [perversion] and oði [madness] and óþoli
[unbearability];
thus will I cut it away, just as I carved it on,
if there should be need of it.'

At this point, Gerðr capitulates, welcomes Skírnir, and agrees to unna ('love') Freyr.
In a sense, this curse is a response to Gerðr's transgression of the will of the gods;
much the same reading is demanded of the story told by Saxo Grammaticus around
1216×23 of Odinus (Old Norse Óðinn) being repeatedly rebuffed by Rinda (Old Norse Rindr) in his attempts to woo her (partly by afflicting her with a fever), whose
similarities to Skírnismál McKinnell and I have independently emphasised, and which
consolidates this reading. Admittedly, Skírnir's moral probity in the text is open to
question: if nothing else, Gerðr's successful resistance to the conventional exercise of patriarchal power (wealth and violence) reduces Skírnir to turning to the unmasculine
and morally dubious method of using magic, and similar criticisms can be levelled at
Odinus in Saxo's narrative. Meanwhile, Bibire has shown that Snorri Sturluson was able to develop the story of Freyja and Gerðr (which he derived at least partly through
a text similar to our version of Skírnismál) into a tale in which 'the gods bring about
their own downfall through their own explicit moral failure'. All the same, Skírnir's
demands represent the will of the in-group, to which Gerðr is expected to accede: as
Larrington put it,

the gods—the collective patriarchal powers Óðinn, Þórr, and Freyr—will be furiously angry
with Gerðr. Far from being a 'good girl', colluding with male wishes, Gerðr's resistance
marks her as an 'uppity woman', literally an anathema to patriarchal society. She is
condemned, as we have seen, to be marginalized, disempowered, victimized, both
sexualized and desexualized; a familiar range of strategies for keeping women in their
place.

Skírnir mentions jötnar and tramar in his curse, but (-)þurs is the most prominent
monster-word, both in terms of the number of repetitions (five) and the fact that as a

45 LARRINGTON, C. (1992), “‘What Does Woman Want?’ Mær und Munr in Skírnismál”.
rune-name (perhaps polysemically denoting the monster), þurs begins the culminating stanza of Skírnir’s curse.46 Pursar here, then, are effectively invoked as a potential punishment for resisting the will of the gods; and this gives us a framework for supposing likewise that there could also be a moral dimension for the affliction of someone by a þurs in the sense of an illness. Dronke considered that

it is apt, succinct, integrating, to use the ogre-world as her [Gerðr’s] hell, since proverbially þurs er kvenna kvöl, ‘Ogre is women’s torment’, þurs vældr kvinnu kvillu, ‘Ogre causes women’s illness’. This is the motto applied to the þ-rune in the Icelandic and Norwegian Runic Poems. Precisely what torment or illness of women is meant can hardly be determined, nor why a þurs should cause it.47

The comparanda which Dronke adduced are surely important, but her final statement that ‘precisely what torment of illness of women is meant can hardly be determined’ seems a little over-cautious (if not, indeed, coy).48 Regarding the þurs as a kvilla, although our evidence is sparse, it is fairly clear that þursar were associated with causing some kind of poisonous fluid in the veins, apparently by means of (metaphorical?) projectiles, and with inflicting sár-riða. Frankis drew attention to the similarity of a þurs causing illness with a sár-þvara, a ‘wound-spear’, to the phenomenon of ælfe (‘elves’, along with ese ‘pagan gods’ and hægtessan ‘witches/valkyries’) causing illness with scotu (‘projectiles’) in the Old English charm Wið færstice—to which we might add that Wið færstice envisages that the patient may have been ‘on blod scoten’ (‘shot in the blood’), just as the Canterbury Rune-Charm is used against áðravari.49 I have admittedly taken pains elsewhere to show that Anglo-Saxon ælfe, the best-attested traditional supernatural agents of illness in our Anglo-Saxon evidence, need not have been synonymous with illness, nor necessarily aligned with monsters in our Old English medical texts.50 While I still think that my argumentation holds, the perspectives adopted in the current article discourage its dogmatic assertion or overextension, in favour of accepting a degree of ambiguity concerning the position of supernatural beings.51 It is noteworthy, then, that the symptoms associated with þursar are similar to the range attributed to the ælfe, which are most frequently associated with fevers. Despite the sparsity of the data, then, it is plausible that our two texts linking þursar with illness are roughly representative. Meanwhile, Skírnir’s curse leaves little doubt that one sort of kvöl that a þurs might inflict on a woman was rape. That þurs as sexual kvöl might overlap conceptually with the þurs as kvilla is consistent to some extent with the comparisons adduced above for the concept of monster as illness: the image of dweorgas and maran inflicting fever by riding their victims arguably has sexual connotations, while the ælfe.

Alongside Skírnismál, another stimulating if less proximate analogue for the idea of afflictions by þursar as related to moral transgression is provided by the Finnish folk-poem Riiden synty (‘The Birth/Origin of Rickets’), collected in the nineteenth century by Elias Lönnrot, and one of the main texts in the canon of Finnish folk-poetry to mention a tursas, the Finnish cognate of þurs. Parallels for Skírnir’s charm have been noted, particularly from Old Norse and Old English texts, showing that it was neither

51 On this kind of variation among the later medieval Scandinavian counterparts of ælfe, the álfr, see now GUNNELL (2007).
unique not solely a literary phenomenon, but *riiden synty* has been little emphasised in connection with *Þursar* (though see Haavio XXXXX) and not at all in connection with *Skírnismál*. Lönnroth’s edition is not, admittedly an ideal source—he was inclined to conflate different oral variants which he had collected, and archival investigation of our recorded variants of the poem would be illuminating—but it suffices here to show the potential of the material:53

<tbody>
<tr>
<td>Neitonen norosta nousi, Hienohelma heiniköstä, Jok’ on kaunis katsellessa, Ilman ollessa ihana; Se ei suostu suhhasihin, Mielly miehiin hyvihin; Tuli yksi mies turlas, Meritursas paitulainen, Kylää kehno keinon keksi, Arvasi hyvän asian: Pani tuolle painajaisen, Saattu nurjan nukkumahan, Laitteli lepeämähän, Nurmmelle mesinukalle, Maalle maksan karvaiselle. Sinä neitosen makasi, Teki neien tiineheksi, Kostutti kohulliseksi, Itse ottavi eronsa, Läksi kurja kulkemahan, Vaivainen vaeltamahan.</td>
<td>From a dell [v. the sea] a maiden rose, a ‘soft skirts’ from a clump of grass, who was lovely to behold, the delight of the world; to suitors she paid no regard, for the good men no fancy had. A giant (<em>turilas</em>) came, a shirted monster (<em>tursas</em>) of the sea, the wretch to be sure had planned a scheme, had thought upon a fine affair: a nightmare he put down on her, he caused the unwilling one to sleep, brought her to seek repose on a honey-dropping sward, on the liver-coloured earth. There he lay with the girl, made the maiden with child, quickened her into pregnancy, himself his departure took, the scoundrel started to go away, the wretch to wander forth.</td>
</tr>
</tbody>
</table>

The text goes on to describe how the girl wakes to find herself pregnant and how God banishes her, describing her as a *portto* (‘harlot’), but that she chooses not to go where she has been sent; the child which she begets winds up being christened by evil women, using water in which they have washed their filthy clothes, as *riisi* (‘rickets’).

The passage quoted presents us with a similar narrative to the one implied by *Skírnismál*. A beautiful woman refuses the offers of suitors; although the text is not explicit on the point, the collocation of this detail with the subsequent description of how the *meritursas* has sex with her, and God’s immediate indictment of her immorality, implies a causal connection between the events: the moral failing facilitates the rape (or perhaps seduction?) by the *meritursas*. This in turn leads to the

---

girl’s banishment by God. (A further moral transgression—this time not paralleled in Skírnismál—is that she refuses to undertake the exile prescribed, and this in turn implicitly contributes to the dire outcome of her liaison with the *meritursas*, the disease of rickets.) If Finnic traditions concerning *tursaat* were similar to those concerning the cognate *þursar*, *Riiden synty* would support the argument that there could have been a moral dimension to the harm inflicted but *þursar*.

**Conclusions**

It is possible, then, to understand some Old Norse words—I have focused here on *þurs*—to denote not only monsters, but also illnessnes. Moreover, it is at least at times helpful to understand these words as presenting monster and illness as identical—as one category. Reading the evidence in this way helps us to interpret the presence of the term *þurs* in two runic charms in relation to the occurrences of the word in mythological texts: it becomes possible to posit a discourse in which the mundane experience of an ailment could be transformed, partly through the polysemy of words, into a struggle between man and monster. This discourse connected illness with a struggle deeply encoded in the mythology of medieval Scandinavian culture, most clearly in stories of the *ragnarök*. Reading *þurs* in this way also allows the prominent role of the god Þórr as a monster-fighter to be linked with his less prominent but nonetheless well-attested associations with healing, giving his attributes a greater degree of conceptual coherence than has hitherto been recognised, and suggesting a greater role for beliefs in gods in ideas about health than has hitherto been recognised.

It is reasonable to say that the wider range of cultural meanings with which I have connected illness had a moral dimension: it had implications for defining proper and improper behaviour. To this extent, my association of mundane ailments with mythological beings also implicitly associates morality with health. Bringing our patchy evidence this far is an achievement, and to take it further is a speculative exercise: certainly our medical texts concerning *þursar* offer no clear evidence that they might afflict people specifically in response to moral transgression. But the broader historical and anthropological context of the present collection, supplemented in my own article with reference to nineteenth-century Finnish tradition, makes it clear that affliction by *þursar* might have been associated with moral transgression. Moreover, the Old Norse poem Skírnismál does provide some encouragement for this reading, since it prominently invokes affliction by *þursar* as part of a curse, uttered in an effort to bring about actions desirable to the gods. This is a fleeting glimpse of a possible world of moral meaning in medieval Scandinavian medicine.
